Working remotely doesn't have to be frustrating

But it often is. Especially for construction, where remote devices may not be equipped to handle even your day-to-day requirements. That's why Lenovo and Teradici are helping organisations build the right infrastructure and empower their remote workforces quickly, easily and sustainably.

Work smarter, not harder, with smart technology

We analyse your workflows to see how you can make the most productivity gains, rather than just plastering over problems with new devices.

Whether it's connecting dispersed teams who need instant access to shared files, or eliminating potential security issues, investing in a seamless and stress-free remote-user experience can improve engagement, productivity and your bottom line.

With Teradici Cloud Access Software, you can enable remote access to Lenovo P-series Workstations. Teradici's PC-over-IP (PCoIP®) technology delivers a secure, responsive and high-definition remote-computing experience, letting employees harness the full capabilities of their workplace systems and software even when they're away from their usual workspace. A 1:1 connection means there's no virtualisation required, so each employee has direct, full-power access to their own PC – wherever they're based.

Matched with Lenovo's workstations, users can follow uninterrupted workflows, enjoying high-definition performance that makes teams forget that they're not in the office. Lenovo customers can now choose Teradici Cloud Access subscriptions to enable secure, highly responsive remoteaccess to their Lenovo P-series Workstations.

Work from home:
Connect from your home PC or laptop to your office ThinkStation and securely access all systems and software.

Work on the go:
Connect from a tablet or laptop to your office or home ThinkStation, letting you work on transport, at a customer site or at a third-party location.

Gain flexibility and productivity by making your workstations work for you

Security

• Your data is safe no matter where your team is located. 'Pixels-only' means that display content is the only information transmitted, so no sensitive business information ever leaves your cloud or data centre.

• Secure remote access is guaranteed. Built on industry-leading (PCoIP®) technology, Teradici connects any endpoint device to Lenovo P-series workstations, as well as virtualised and centralised Windows or Linux desktops.

Flexibility

• Whether it's laptops, PCs, Macs, tablets, zero clients or thin clients, employees can access their Lenovo workstations from any endpoint device.

• Cloud Access Software provides secure remote access to physical or virtual Workstations, any mix of private or public cloud environments, Windows or Linux virtual desktops and GPU- or non-GPU-based infrastructure.

Expertise

• We believe in addressing workflows before workstations. We'll work closely with you to make sure you have the right infrastructure to make operations flow better.

• With Lenovo and Teradici, you'll receive a close partnership from hardware and software experts – helping you create the best operational landscape for remote and hybrid working.

Uncompromised performance for end-to-end productivity

Enable high-performance remote and mobile experiences, whether you're on- or off-site.

Strengthen security and protect client's information, with only encrypted pixels travelling over the network.

Use the full capabilities of Computer Aided Design software through your 1:1 connection to an office workstation.

Why Teradici and Lenovo?

Award winning...

It's the closest an engineer can get to winning an Oscar – Teradici recently won the Engineering Emmy® Award for Outstanding Achievement in Engineering Development for their uncompromising user experiences.

...high-performance power...

Top government agencies, media conglomerates, production studios, financial firms and design houses all trust Lenovo and Teradici to provide the right support that enables consistent, high-performance remote access to powerful workstations.

...from the inventors themselves

There are no safer hands than the original creators – and it's Teradici who developed the PCoIP® remote display protocol. You'll gain exclusive access to software, support and resources that deliver remote desktop experiences with the highest levels of security, responsiveness and fidelity.

Trusted by businesses like yours

> With our VFX cloud and Teradici Cloud Access Software, we're no longer limited by creative resources and hardware when we pitch for work. We can grow or shrink our workforce as needed by spinning virtual machines up or down. "

Jeremy Smith,
CTO, JELLYFISH
